DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3 and 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over U. S. Patent No. 6,553,251 Lahdesmaki in view of U. S. Patent No. 5,760,688 to Kasai.

Regarding Claims 1, 3, 7, 13 and 14, Lahdesmaki teaches a system for noninvasive measuring of a conductivity in a volume, said system comprising magnetic means arranged as a resonant circuit, said magnetic means being arranged to induce an oscillating magnetic field in said volume, said system further comprising power supply means connectable to said magnetic means (Col. 7 lines 15-20).

Lahdesmaki does not expressly teach power supply means being arranged to provide a signal characteristic to a power loss of said resonant circuit upon an application of said magnetic field to said volume, and that the magnetic means are integrated into an insulating fabric carrier.

Kasai teaches a power supply means characteristic to a power loss of said resonant circuit upon an application of said magnetic field to said volume (Fig. 11

element 102), and that the magnetic means are integrated into an insulating fabric carrier (Fig. 5).

It would have been obvious to one of ordinary skill in the art at the time of invention to modify Lahdemaki with a power supply means arranged to provide a signal characteristic to a power loss of said resonance circuit as taught by Kasai, since such a setup would result it the system being able to detect power loss.

Regarding **Claims 2, 8, and 9,** Kasai teaches the use of a reference signal (Col. 5 lines 35-40).

Regarding **Claims 5 and 6**, Kasai does not expressly teach that the insulatig fabric carrier is a bed sheet and a safety belt.

It would have been obvious to one of ordinary skill in the art at the time of invention to modify Lahdesmaki and Kasai with a setup such that the fabric carrier is a bedsheet or a safety belt, since such a setup would result in the system being more flexible and usable in many different situations, moreover where you place the coil is merely a design choice.

Regarding **Claim 10**, Lahdesmaki teaches that the target volume comprises a heart of the user (Abstract and Fig. 3a).

Regarding Claims 11 and 12, Lahdesmaki teaches triggering an alarm upon detecting disorder in a condition of a user (Fig. 7 element 726).

Claims 4-6, are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,553,251 Lahdesmaki in view of U.S. Patent No. 5,760,688 to Kasai further in view of U.S. Publication No. 2002/0151788 to Menon.

Regarding **Claim 4**, Lahdesmaki and Kasai teaches all of the above claimed limitations but does not expressly teach that the fabric carrier is a part of clothing.

Menon teaches that the fabric carrier is a part of clothing.

It would have been obvious to one of ordinary skill in the art at the time of invention to modify Lahdesmaki and Kasai with a setup such that the fabric carrier is part of the clothing, as taught by Menon, since such a setup would result in the system being more flexible and usable in many different situations, moreover where you place the coil is merely a design choice.

Regarding Claims 5 and 6, Kasai teaches that the insulating fabric carrier is a bed sheet and a safety belt.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SANJAY CATTUNGAL whose telephone number is (571)272-1306. The examiner can normally be reached on 9:30 - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (571)272-0823. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.
